

Lubricants Engineered for the Application

WearMaster[®] KG 453 Corrosion Control Grease

WearMaster KG 453 is the ideal grease for complete corrosion control in areas of high salt and chemical contamination. The high drop point and good E.P. characteristics also make this a high performance multi-purpose grease.

WearMaster KG 453 is a unique calcium complex lubricant developed especially for bearings in corrosive environments. It is formulated with rust and oxidation inhibitors, possesses good Extreme Pressure abilities, and effectively withstands corrosion caused by salt water, salt air, and atmospheric chemicals. In addition, WearMaster KG 453 is recommended as a coating for any metal surface exposed to similar conditions. WearMaster KG 453 is an extremely stable lubricant with excellent resistance to water, and a minimum dropping point of 500°F.

TYPICAL SPECIFICATIONS	
NLGI Grade	1½
Base Soap	Calcium Complex
Dropping Point °F (°C), Min	500 (260)
Penetration Worked	290-310
Penetration Unworked	290-310
Timken OK Load, Lbs. Min.	40
Color	Amber
